DataBank's new Richardson, TX, facility (right), the new home of WebChartMD's data center.

### Key Facts:

- Founded in 2004, DataBank is headquartered in Dallas, Texas, and currently owns and operates three large-scale, commercial data centers.
- DataBank's Fortune 500 clients include Boeing, United Healthcare, Perot Systems, Verizon, and Omni Resorts.
- Located within a data center industrial park that has its own on-site and redundant power sub-station.

### Infrastructure Features:

- Eight (8) 2.75 MW generators (right)

- Forced air cooling via raised floor data center fed by five (5) 500-ton cooling towers and dual-fed high efficiency computer room air handling (CRAH) units (left).

- Automatic transfer switch (ATSA, right) transfers power from main grid to back-up generators.

- Dedicated uninterruptible power supply (UPS) supports the system in the event of a power disruption while generators come online.

## Security Features:

- Dual factor authentication (badge and biometric) on all exterior access points as well as for data hall access.
- All exterior entry points secured behind perimeter fencing, gates or walls.
- Camera coverage of all interior spaces, exterior access points, and equipment yard with video retention for a minimum of 90 days.
- 24/7 on-site security.
- Perimeter wall (24' concrete with steel gates) around equipment yard.
- Roving campus security.
